

V1 | SYNTHETIC TRAINING ARTIFACT

NovaCred Financial

NovaCred Flex Installment Loan Underwriting Policy Manual

Version: V1

Effective period: 2026-07-01 onward

Policy status: Current

Document family: Underwriting manual

This document is completely fictional. All lender names, product names, thresholds, codes, decisions, sources, and operating logic are invented for retrieval and evaluation testing. No real lender policy, legal threshold, or production rule is represented.

Controlled corpus notice: numeric codes are lender-scoped. A code used here may intentionally have a different meaning in another synthetic lender manual.

PRODUCT OVERVIEW

The NovaCred Flex Installment Loan is a short-term consumer installment product that applies documented identity, credit, income, fraud, compliance, and affordability controls. The decision engine can receive prescreened leads or evaluate a fresh application. Loan amount, term, pricing, and servicing treatment are determined only after the applicable path completes its required checks. A marketing selection or prequalification pass is not a final approval.

Version 1 is effective on 2026-07-01. It narrows several exceptions, tightens selected thresholds, adds explicit score-schema mismatch handling, and inserts an evidence-integrity gate into the full-underwriting rework loop. Historical Version 0 decisions remain governed by the policy and configuration active when those decisions were made.

Version authority

For a current-policy question, Version 1 is authoritative. For an application evaluated from 2026-01-01 through 2026-06-30, Version 0 remains the historical authority. Never combine a Version 0 threshold with a Version 1 exception.

MARKETING CHANNELS AND UNDERWRITING STRATEGIES

NovaCred supports Prescreen and Non-Prescreen paths. Prescreen starts with a controlled audience selected from permitted synthetic sources. Non-Prescreen starts with an applicant who was not selected through that audience process. A path identifier and configuration version must travel with the application so reviewers can reconstruct the population logic, threshold set, and sequence that were applied.

The paths use common control objectives but can apply different freshness windows and verification requirements. Identical controls reuse codes. A reused code does not imply that the source event or timestamp is identical across stages or paths.

PRESCREEN SELECTIONS

Table 1: Prescreen Criteria

Criterion	Version 1 requirement	Source
Residence Status	U.S. resident status coded Eligible with no unresolved discrepancy	CivicGraph Residence File
Age Band	Applicant age at least 20 years with no age conflict	NovaCred Identity Hub
Existing Exposure	No active Flex loan with remaining balance above \$5,800	NovaCred Account Ledger
Recent Delinquency	No account-level delinquency of 60+ days in the prior 180 days	NovaCred Account Ledger
Credit Availability	No active bureau freeze indicator in the selection extract	OrbitScore Bureau Feed
Fraud Disposition	No unresolved hard-block fraud flag in the prior 12 months	NovaShield Fraud File
Contactability	Phone and email pass basic deliverability checks	Contact Integrity Service
Marketing Suppression	Not present on the internal do-not-market register	NovaCred Suppression Register
Income Proxy	Synthetic income proxy at or above \$2,100 monthly	NovaCred Affordability Index
Application Velocity	No more than 2 NovaCred-originated applications in the prior 30 days	NovaCred Application Ledger

NON-PRESCREEN MARKETING

Non-Prescreen marketing can originate from a general product page, approved partner campaign, or controlled retargeting source. It does not rely on the Prescreen selection decision. Missing path flags are quarantined rather than silently defaulted. Campaign identifier, first-contact timestamp, source identifier, and configuration version are operational lineage and are not themselves credit variables unless a rule explicitly uses them.

APPLICANT TYPES

Table 2: Applicant Types

Type	Description	Notes
Primary	Person whose application establishes the principal underwriting record	Required for every funded account
Co-applicant	Second applicant with separate identity and income attributes	Both applicants must pass identity controls
Joint	Two applicants sharing one contractual borrowing record	Evaluated jointly; verification attributes remain individual
Authorized Payer	Person permitted to supply a payment account without becoming a borrower	Cannot satisfy borrower underwriting requirements
Business-Related Natural Person	Consumer whose repayment source includes sole-proprietor or informal business income	Uses self-employed documentation rules

UNDERWRITING

Underwriting has prequalification and full-underwriting stages. Prequalification determines whether an application may continue using early identity, bureau, fraud, and basic affordability signals. Full underwriting uses refreshed evidence, final compliance checks, scoring, verification outcomes, and manual review. A later rule may be skipped after an earlier terminal result, but the skip reason must distinguish not applicable from not evaluated.

Codes are stable identifiers rather than severity ranks. Rule tables provide the rule-to-code relationship. Exhibit C is the authoritative code dictionary. A complete code answer normally requires both the applicable rule row and the code-definition entry.

PRESCREEN PREQUALIFICATION RULES

Table 3: Prescreen Prequalification Rules

Rule	Source	Action	Code
Blocked SSN [1]	NovaShield Identity Blocklist	NOAA	101
Blocked Phone	NovaShield Contact Risk Feed	NOAA	102
Blocked Email	NovaShield Contact Risk Feed	NOAA	103
IP Velocity	NovaShield Network Monitor	Manual Review	104
Credit Freeze	OrbitScore Bureau Feed	RFAI	105
Thin File	OrbitScore Bureau Feed	RFAI	106
Score Floor	OrbitScore Bureau Feed	NOAA	107
Insufficient Income	NovaCred Affordability Index	NOAA	108
SSI Threshold	Income Verification Service	NOAA	109
Recent Decline	NovaCred Application Ledger	NOAA	110
Inquiry Velocity	OrbitScore Bureau Feed	NOAA	111
MLA Check	NovaCred Compliance Service	Manual Review	112
OFAC Match	NovaCred Compliance Service	NOAA	113
FACTA Alert	OrbitScore Bureau Feed	RFAI	114
Scoring	NovaCred Model Services	RFAI	115, 116
Existing Exposure	NovaCred Account Ledger	NOAA	117
Duplicate Application	NovaCred Application Ledger	NOAA	118
Contact Inconsistency	NovaCred Identity Hub	Manual Review	119

[1] Blocked SSN exception: the active block may be treated as passed only when it is a resolved administrative duplicate older than 48 months, the current identity comparison is exact, and a clean secondary identity source corroborates the match. This exception permits continuation; it is not approval.

PRESCREEN FULL UNDERWRITING RULES

Table 4: Prescreen Full Underwriting Rules

Rule	Source	Action	Code
Blocked Routing [2]	NovaShield Identity Blocklist	NOAA	120
Credit Score Confirmation	OrbitScore Bureau Feed	NOAA	121
Credit Freeze Refresh	OrbitScore Bureau Feed	RFAI	105
Thin File Recheck	OrbitScore Bureau Feed	RFAI	106
Income Reconciliation	Income Verification Service	RFAI	122
Employment Tenure	Income Verification Service	NOAA	123
Bank Stability	NovaCred Transaction Analyzer	NOAA	124
Payment Stress	NovaCred Affordability Index	NOAA	125
MLA Final	NovaCred Compliance Service	Manual Review	112
OFAC Final	NovaCred Compliance Service	NOAA	113
FACTA Resolution	OrbitScore Bureau Feed	RFAI	114
Scoring [3]	NovaCred Model Services	RFAI	115, 116
High Inquiry Overlay	OrbitScore Bureau Feed	NOAA	126
Recent Application Decline	NovaCred Application Ledger	NOAA	110
Manual Identity Reconciliation	NovaCred Identity Hub	Manual Review	127
Offer Age	NovaCred Marketing Ledger	RFAI	128
Residence Mismatch	NovaCred Identity Hub	Manual Review	129
Document Integrity	NovaCred Document Gateway	NOAA	130
Score Schema Version Mismatch	NovaCred Model Registry	RFAI	141

[2] Blocked Routing exception: a block caused solely by a temporary network anomaly may be treated as passed only after two clean Intraday Account Review observations at least 24 hours apart and documented supervisor authorization. The original block, both observations, the exception reason, and authorizer must remain in history. Passing this rule does not approve or fund the application.

[3] Scoring continuation exception: if a required score vector is unavailable and the Null Score condition did not trigger, the scoring rule may be treated as passed solely to continue to non-score controls. No score is created. Code 141 applies when a vector exists but belongs to an incompatible score schema; that condition must be resolved rather than numerically approximated.

NON-PRESCREEN PREQUALIFICATION RULES

Table 5: Non-Prescreen Prequalification Rules

Rule	Source	Action	Code
Blocked SSN [1]	NovaShield Identity Blocklist	NOAA	101
Blocked Phone	NovaShield Contact Risk Feed	NOAA	102
Blocked Email	NovaShield Contact Risk Feed	NOAA	103
IP Velocity	NovaShield Network Monitor	Manual Review	104
Credit Freeze	OrbitScore Bureau Feed	RFAI	105
Thin File	OrbitScore Bureau Feed	RFAI	106
Score Floor	OrbitScore Bureau Feed	NOAA	107
Insufficient Income	NovaCred Affordability Index	NOAA	108
SSI Threshold	Income Verification Service	NOAA	109
Recent Decline	NovaCred Application Ledger	NOAA	110
Inquiry Velocity	OrbitScore Bureau Feed	NOAA	111
MLA Check	NovaCred Compliance Service	Manual Review	112
OFAC Match	NovaCred Compliance Service	NOAA	113
FACTA Alert	OrbitScore Bureau Feed	RFAI	114
Scoring	NovaCred Model Services	RFAI	115, 116
Acquisition Source Risk	NovaCred Channel Monitor	Manual Review	131
Device Reuse	NovaShield Device Graph	Manual Review	132
Early-Payoff Pattern	NovaCred Account Ledger	NOAA	133

NON-PRESCREEN FULL UNDERWRITING RULES

Table 6: Non-Prescreen Full Underwriting Rules

Rule	Source	Action	Code
Blocked Routing [2]	NovaShield Identity Blocklist	NOAA	120
Credit Score Confirmation	OrbitScore Bureau Feed	NOAA	121
Credit Freeze Refresh	OrbitScore Bureau Feed	RFAI	105
Thin File Recheck	OrbitScore Bureau Feed	RFAI	106
Income Reconciliation	Income Verification Service	RFAI	122
Employment Tenure	Income Verification Service	NOAA	123
Bank Stability	NovaCred Transaction Analyzer	NOAA	124
Payment Stress	NovaCred Affordability Index	NOAA	125
MLA Final	NovaCred Compliance Service	Manual Review	112
OFAC Final	NovaCred Compliance Service	NOAA	113
FACTA Resolution	OrbitScore Bureau Feed	RFAI	114
Scoring [3]	NovaCred Model Services	RFAI	115, 116
High Inquiry Overlay	OrbitScore Bureau Feed	NOAA	126
Recent Application Decline	NovaCred Application Ledger	NOAA	110
Manual Identity Reconciliation	NovaCred Identity Hub	Manual Review	127
Offer Age	NovaCred Marketing Ledger	RFAI	128
Residence Mismatch	NovaCred Identity Hub	Manual Review	129
Document Integrity	NovaCred Document Gateway	NOAA	130
Score Schema Version Mismatch	NovaCred Model Registry	RFAI	141
Channel Attestation	NovaCred Channel Monitor	RFAI	134
Address Evidence	NovaCred Identity Hub	RFAI	139
Funding Method Verification	NovaCred Payment Graph	RFAI	140
Bank Account Ownership	NovaCred Payment Graph	NOAA	135
Notice Generation	NovaCred Notice Service	NOIA	136
Data Correction Notice	NovaCred Notice Service	NOIA	137
Disposition Notice Hold	NovaCred Notice Service	NOIA	138

Path-specific differences must remain visible in configuration. Non-Prescreen adds source, device, attestation, address, and funding-method controls. Shared controls retain their common code so monitoring can compare them with path-aware denominators.

SCORE CUT AND LINE ASSIGNMENT

Line assignment is a two-axis lookup using a refreshed representative bureau band and the NovaCred Risk Score band. The selected adjustment is applied only after hard policy rules have passed or been resolved. A positive cell cannot override a decline, compliance stop, unresolved manual review, or missing compatible score band.

Table 7: Line Assignment Matrix

Vantage band	<680	680-749	750-829	830-909	>909
<530	-\$1,500	-\$1,250	-\$1,000	-\$750	-\$500
530-569	-\$1,250	-\$900	-\$650	-\$400	-\$200
570-609	-\$900	-\$600	-\$250	+\$100	+\$250
610-649	-\$500	-\$200	+\$150	+\$350	+\$700
>649	-\$250	+\$150	+\$500	+\$850	+\$900

The minimum line floor and maximum line cap remain independent controls applied after the matrix cell is selected. Missing or incompatible bands must use the applicable evidence or Code 141 path; they must not default to the highest or lowest band.

INCOME VERIFICATION

Table 8: Income Verification Tiers

Tier	Criteria	Required documents
Tier 1	Stable salaried employment and current consistent automated source	One current pay statement plus automated employment confirmation
Tier 2	Variable employment, recent job change, or incomplete automated confirmation	Two recent pay statements plus employment-status confirmation
Tier 3	Self-employed, contract, commission-heavy, or business-derived income	Two recent bank statements, one business/income statement, and self-employment attestation
Tier 4	Complex or disputed income with material reconciliation variance	Manual Review package, source reconciliation notes, and reviewer disposition

Code 122 fires when stated income differs from verified income by more than 22 percent. The evidence request must identify the conflicting sources and measurement window. A resolved request causes a new evaluation event; it does not mutate the original event.

EXHIBIT A - PRESCREEN SELECTION CRITERIA

A Prescreen firm offer is available only after the Version 1 audience criteria pass. It does not bypass current underwriting. Table 1 explains why the audience record could be marketed; Table 3 governs application prequalification; Table 4 governs refreshed full underwriting. An application submitted after the Version 1 effective date uses Version 1 thresholds even if an older campaign artifact exists, unless the recorded transition policy explicitly preserves the historical configuration for that decision event.

Selection records must retain selection timestamp, campaign identifier, source version, and policy version. A score or eligibility change between audience selection and application intake is evaluated using current evidence. Marketing status is not evidence that all downstream rules have passed.

EXHIBIT B - UNDERWRITING DECISION FLOW

New Customer Prequalification Process - Version 1

New Customer Full Underwriting Process - Version 1

EXHIBIT C - AVAILABLE NOAA, RFAI, NOIA, AND MANUAL REVIEW CODES

This appendix is the authoritative Version 1 code dictionary for Tables 3 through 6. Numeric codes remain stable identifiers. Definitions and thresholds below apply only to NovaCred Version 1.

Table 9: Available NOAAs

Code	Version 1 description
NOAA 101	Blocked SSN: active identity block. The 48-month administrative-duplicate exception also requires exact current identity and a clean secondary source.
NOAA 102	Blocked Phone: phone matches a high-confidence synthetic fraud suppression record.
NOAA 103	Blocked Email: email hash appears on the synthetic high-risk registry.
NOAA 107	Score Floor: representative bureau score is below the configured prequalification floor.
NOAA 108	Insufficient Income: normalized monthly income is below the configured underwriting minimum.
NOAA 109	SSI Threshold: SSI-only income is below the configured monthly equivalent threshold.
NOAA 110	Recent Application Decline: prior non-fraud credit decline is inside the configured path and stage window.
NOAA 111	Inquiry Velocity: hard inquiry count exceeds the prequalification threshold after exclusions.
NOAA 113	OFAC Match: potential sanctions screening match remains uncleared.
NOAA 117	Existing Exposure: current Flex balance plus requested amount exceeds the Version 1 exposure cap.
NOAA 118	Duplicate Application: identity fingerprint indicates an active duplicate in the same campaign window.
NOAA 120	Blocked Routing: block persists at full underwriting. A temporary network anomaly requires two clean observations 24 hours apart and supervisor authorization for override.
NOAA 121	Credit Score Confirmation: refreshed representative bureau score is below the full-underwriting floor.
NOAA 123	Employment Tenure: tenure is below the configured minimum without alternate qualifying income.
NOAA 124	Bank Stability: eligible average monthly transaction inflow is below the configured floor.
NOAA 125	Payment Stress: projected installment-to-net-inflow ratio is above 0.29.
NOAA 126	High Inquiry Overlay: hard inquiry count exceeds the stricter final-stage threshold.
NOAA 130	Document Integrity: required evidence has unresolved alteration, corruption, or integrity indicators.
NOAA 133	Early-Payoff Pattern: repeated rapid payoff-and-reapply cycles exceed the configured window.
NOAA 135	Bank Account Ownership: account ownership cannot be reconciled to an eligible applicant.

Table 10: Available RFAIs

Code	Version 1 description
RFAI 105	Credit Freeze: bureau security freeze prevents normal access or remains active at refresh.
RFAI 106	Thin File: insufficient tradelines or alternate history requires additional evidence.
RFAI 114	FACTA Alert / Resolution: identity-theft alert requires evidence or remains unresolved.
RFAI 115	Credit Risk Model Score Vector is missing, incomplete, or outside automated scoring.
RFAI 116	Bank Transaction Model Score Vector is missing, incomplete, or outside automated scoring.
RFAI 122	Income Reconciliation: stated income differs from verified income by more than 22 percent.
RFAI 128	Offer Age: Prescreen artifact is older than 30 days or Non-Prescreen artifact is older than 21 days.
RFAI 134	Channel Attestation: partner-originated application lacks required acquisition attestation.
RFAI 139	Address Evidence: current residence cannot be reconciled after automated checks.
RFAI 140	Funding Method Verification: destination or ownership evidence is incomplete.
RFAI 141	Score Schema Version Mismatch: supplied score belongs to an incompatible model schema and cannot enter the current matrix.

Table 11: Available NOIAs

Code	Description
NOIA 136	Borrower Notice / Verification Pending: a documentation event requires an operational notice.
NOIA 137	Borrower Notice / Data Correction Requested: a critical field changed after intake and notice issuance.
NOIA 138	Final Disposition Pending: notice generation awaits a downstream policy event.

Table 12: Available Manual Review Codes

Code	Description
Manual Review 104	IP Velocity: rolling application count needs network-context review.
Manual Review 112	MLA status remains unresolved at the applicable stage.
Manual Review 119	Contact metadata contains an unresolved high-risk mismatch.
Manual Review 127	Core identity fields disagree across approved sources.
Manual Review 129	Declared residence conflicts with validated address evidence.
Manual Review 131	Non-Prescreen acquisition source exceeds its permitted risk band.
Manual Review 132	Device fingerprint is linked to the configured number of unrelated active applications.

Table 13: Code Cross-Reference Audit

Family	Codes covered	Rule tables
NOAA	101, 102, 103, 107-111, 113, 117, 118, 120, 121, 123-126, 130, 133, 135	Tables 3-6
RFAI	105, 106, 114-116, 122, 128, 134, 139-141	Tables 3-6
NOIA	136-138	Table 6
Manual Review	104, 112, 119, 127, 129, 131, 132	Tables 3-6

Table 14: Fraud Consortium Criteria

Criterion	Synthetic signal	Severity	Guidance
FC-01	Device reused across 6+ unrelated applicants in 12 hours	High	Manual Review unless context reconciles
FC-02	Contact point reused across 8+ active applications	High	Verify ownership and relationship
FC-03	Identity attributes converge with active synthetic cluster	Critical	NOAA if active block; otherwise review
FC-04	Application velocity exceeds consortium burst threshold	Medium	Compare network and partner context
FC-05	Repeated ownership conflicts across applicants	High	NOAA if ownership cannot be resolved
FC-06	Rapid payoff-and-reapply cycle across accounts	Medium	Evaluate Code 133; one cycle is not automatic fraud
FC-07	Household cluster shares device with consistent identity	Low	May clear after reconciliation
FC-08	Partner traffic has anomalous network signature	Medium	Evaluate Code 131 before terminal action

Table 15: Override Footnote Register

Footnote	Annotated rule	Version 1 effect
[1]	Blocked SSN	Continuation allowed only after 48 months, exact identity comparison, and clean secondary corroboration.
[2]	Blocked Routing	Continuation allowed only after two clean intraday observations 24 hours apart and supervisor authorization.
[3]	Scoring	A missing vector may permit continuation in the narrow case; no score is invented and Code 141 cannot be bypassed.
[4]	RFAI appendix	Directs reviewers to Table 10 for the complete Version 1 RFAI list.

APPENDIX OPERATING NOTES

SOURCE PRECEDENCE AND DATA FRESHNESS

Rule configuration must define source precedence. Reviewers must not choose the most favorable source. When approved sources disagree, retain both responses, timestamps, and the configured tie-break result. Source availability does not make stale data current.

EVIDENCE AND DECISION HISTORY

Each terminal, evidence-request, notice, or manual result retains source data, timestamp, rule code, action, policy version, and reviewer or system identifier. A replacement artifact does not erase the prior artifact. Overrides preserve the original failed condition and the evidence used to authorize continuation.

VERSION TRANSITION RECONCILIATION

If an application spans the 2026-07-01 Version 1 effective boundary, the system creates a version-transition reconciliation event. It records the prior configuration, current configuration, changed rules that are material to the open application, and which version governs each evaluation event. The original Version 0 result remains reproducible. A rerun under Version 1 is a new decision event and cannot mutate the historical record.

RULE REPROCESSING

Reprocessing is triggered only by a defined event such as new bureau data, requested evidence, source correction, or approved technical retry. It must not be used repeatedly to search for a favorable outcome. The initiating event, before-and-after states, and configuration version remain linked.

MONITORING

Rule firing rates are segmented by path, source, month, score band, applicant type, policy version, and exception use. Analysts compare rule changes with source completeness, latency, fallback rates, and applicant mix. Code-level monitoring without version segmentation can hide a threshold change.

EXCEPTION GOVERNANCE

Exceptions are rare, documented, and separately reportable. Each exception identifies the rule, condition, authority, evidence, timestamp, and scope. Passing an exception-eligible rule means only that processing may continue. It never substitutes for remaining credit, fraud, compliance, verification, or funding controls.

FRAUD, VERIFICATIONS, AND MANUAL REVIEW

INTRADAY ACCOUNT REVIEW

Intraday Account Review confirms current account and routing observations before final funding readiness. For the Version 1 Code 120 exception, one clean observation is insufficient: two clean observations must be at least 24 hours apart and the supervisor authorization must reference both. The prior block remains visible.

MANUAL REVIEW OUTCOMES

Manual Review can approve the reviewed condition, counteroffer, request more information, or decline when policy authority supports that action. A reviewer may not invent a decline reason or convert a required manual condition into an evidence request merely to avoid review.

SCORING AND MODEL OUTPUT HANDLING

SCORE LINEAGE

Raw score, normalized score, model identifier, model version, schema version, timestamp, and transformation lineage are retained. Numeric similarity does not make two score schemas compatible. Code 141 is used when a score exists but cannot be safely mapped into the active Version 1 matrix.

MISSING SCORES

The narrow scoring footnote can permit continuation when a vector is unavailable and Null Score did not fire. It cannot create a score, assign a line, or guarantee approval. A schema mismatch is distinct from a missing vector and follows Code 141.

APPLICATION REWORK, NMI, AND REMEDIATION

RFAI LIFECYCLE

An RFAI specifies required evidence, reason, expiration, stage, and source code. Resolved evidence passes the evidence-integrity gate before the active full-underwriting checks rerun. The prior request and all submitted versions remain in history.

MULTIPLE REQUESTS

Operations may consolidate requests when one artifact can satisfy several rules, but the audit record retains the relationship from every request to its source code. One uploaded document must not obscure which conditions were evaluated.

REOPEN CONTROLS

A declined application is not reopened because an applicant calls. Reopening uses a configured event, preserves the original decision, checks evidence freshness, and selects the policy version applicable to the new evaluation event.
